Schlebel, W.
THE LIMITS OF ACCURACY IN THE ANALYSIS OF
RAW SUGAR BY POLARIZATION. [1963] [16]p.
Order from SLA \$1.60 63-16366

Trans. of Zucker (West Germany) 1958, v. 11, no. 8,
p. 182-187.

DESCRIPTORS: *Carbohydrates, *Polarographic
analysis, Polarization.

The examination of raw sugar through polarization
requires above average care and experience. The
results will be influenced by a number of factors
which are called natural errors occurring in the indi-
vidual steps of the investigation. It is very important
that the methods used by individual laboratories be
identical, in order to have differences of 0.1 or 0.2
of a degree of polarization appearing as little as
possible. A few suggestions are given. (Author)

16refs

Order from SLA \$1.60

TT-64-10038

Trans. of Optik (West Germany) 1952, v. 9, no. 4,
p. 145-153. (Abstract available)

DESCRIPTORS: *Electron optics, *Electron micro-
scopes, *Electric filters, *Electron lenses, Velocity,
Distortion, Inelastic scattering, Resolution,
Integrators.

The normally thin contrast of the electron microscope
image is reduced further by chromatic aberration. A
possibility of reducing the chromatic aberration is the
filtering out of the electrons which are inelastically
scattered at the object. In the following work it is
